

Conservation is a state of harmony
between man and earth.

® CERES

CERES is a system to support the monitoring of the field management, specialized in the environmental management and the follow-up of compensations generated by the affectations in the field.

OBJECTIVE

Give integral support to companies so that they have an integral interaction in a project with the information of affected and economic centralized, to have a clear panorama at the moment of carrying out the works.

WHY CERES?

With CERES you have electronic control of the areas of work and affects in assignments and contracts

Specialized work team

White papers from the work areas.

User-oriented functionality.

Compliance with the national regulatory framework.

The CERES system is a modularized solution designed to facilitate community relations, environmental management, and facility operations through efficient administration, monitoring, and service delivery.
